SUMMARY

Backend Software Engineer with 5+ years of experience building production APIs, backend services, and distributed applications. Experienced with Go, Python, Docker, Kubernetes, Linux, CI/CD, and production monitoring, with a strong focus on reliability, observability, and operational excellence. Proven ability to troubleshoot complex systems, investigate production issues, and collaborate across engineering and operations teams to deliver scalable, maintainable software.

TECHNICAL SKILLS

- **Languages:** Python, Go, Java, SQL, TypeScript/JavaScript, C#, Rust, Bash
- **Backend:** REST APIs, FastAPI, Node.js, Gin, Microservices, WebSockets
- **Cloud & DevOps:** Docker, Kubernetes (k3s), AWS (EC2, IAM, S3), Linux, NGINX, Jenkins, GitHub Actions
- **Databases & Tools:** PostgreSQL, MySQL, SQLite, Redis, Git, Gradle, Splunk, Logging, Monitoring, Metrics, Alerting

PROFESSIONAL EXPERIENCE

Allied Universal | Security Technician 2 (Government Technology Environment) - Olympia, WA | July 2026 - Present

- Monitored enterprise CCTV, alarm, and access control systems while investigating system events, documenting incidents, and supporting secure operations within a government technology environment.
- Assisted employees, contractors, and visitors with credential verification, access requests, and access-related issues while maintaining compliance with established government security procedures.
- Utilized Lenel S2, Milestone XProtect, Avigilon, Traka, and SharePoint to monitor enterprise systems and maintain accurate operational records.

The Home Depot | General Warehouse Associate (System Tester & QA) - Lacey, WA | February 2025 – June 2026

- Validated warehouse software during production rollout, identifying workflow defects before deployment.
- Reproduced and documented edge-case failures in high-volume operations, accelerating engineering remediation.
- Collaborated with warehouse operations and technical teams to reproduce software issues and validate corrective fixes during production rollout.

Blue Torch Games | Software Engineer - Remote | June 2020 – January 2025

- Developed and maintained three production applications supporting live user workflows.
- Built and maintained backend APIs supporting production services and real-time application functionality.
- Designed scalable object-oriented systems supporting deterministic state updates in real-time environments.
- Refactored performance-critical components to improve runtime stability under high-load execution paths.
- Maintained CI/CD workflows, version control practices, and production release processes across application releases.

PROJECTS & INDEPENDENT EXPERIENCE

E-Commerce REST API with CI/CD | Team of 8 | 2025

[Github](#)

- Designed and deployed a Go-based REST API to replace manual order-processing workflows, enabling consistent data handling and reproducible releases.
- Implemented automated CI/CD pipelines with Jenkins, reducing deployment steps and improving release reliability.
- Containerized and deployed services on Linux with Docker and NGINX to ensure consistency across builds.

Production Monitoring Dashboard | Independent Project | 2025

[Github](#)

- Built a real-time monitoring dashboard for distributed services to improve system visibility and troubleshooting.
- Implemented WebSocket-based live metric streaming for real-time CPU, memory, network, and service monitoring.
- Orchestrated multi-replica deployments on Kubernetes (k3s) to simulate distributed production environments.
- Configured centralized logging and monitoring workflows to improve troubleshooting and operational visibility.

EDUCATION

The Evergreen State College — B.S. Computer Science & Software Engineering

December 2024
