SUMMARY

Software Engineer with 4+ years of experience developing and maintaining production applications, plus hands-on experience operating and troubleshooting large-scale, live robotic automation systems. Skilled in Linux, Windows, SQL, log analysis, and production debugging, with experience escalating issues to software engineering teams. B.S. in Computer Science & Software Engineering focused on backend development, reliability, and maintainable software.

TECHNICAL SKILLS

- **Languages:** Go, Python, Java, C#, JavaScript/TypeScript, SQL, Bash
- **Backend & Development:** REST APIs, Gin, FastAPI, Node.js, Object-Oriented Design, Software Testing, Debugging
- **Systems & Infrastructure:** Linux, Windows, Docker, Kubernetes (k3s), NGINX, AWS (EC2, IAM, S3), SSH, RDP
- **Databases & Observability:** PostgreSQL, MySQL, SQLite, Redis, Splunk, Log Analysis, Monitoring, Metrics
- **Tools & Automation:** Git, Jenkins, GitHub Actions, Gradle, CI/CD, Bash/Python Scripting

PROFESSIONAL EXPERIENCE

Symbotic | Automation System Operator - Centralia, WA | August 2026 - Present

- Operate and monitor a large-scale automated material-handling system, including robotic arms, lifts, autonomous carts across multiple levels, and five production cells.
- Troubleshoot system stoppages, robot faults, safety stops, and software-related issues by working directly on Linux servers via SSH and Windows Server jump hosts via RDP, reviewing diagnostic logs, dashboards, and operational data to determine recovery actions and escalation paths.
- Coordinate daily operations across cell operators, maintenance personnel, and the customer's warehouse team, maintaining a system-wide view of production flow, interdependencies, and downstream impact.
- Escalate software and system issues to Tier 2 support and off-site software engineers with clear timelines, log evidence, and reproduction details; document findings and recovery procedures for team use.
- Use SQL, Bash, and Python for log analysis, fault investigation, and operational reporting.

The Home Depot | General Warehouse Associate (System Tester & QA) - Lacey, WA | February 2025 – June 2026

- Tested a voice-directed warehouse management system during production rollout, identifying workflow defects, device failures, and edge cases before broader deployment.
- Verified system behavior in production-like environments to support reliability and deployment readiness.

Blue Torch Games | Software Engineer - Remote | June 2020 – January 2025

- Shipped and maintained three production applications across desktop and mobile platforms (Steam, Google Play), supporting live users across multiple release cycles.
- Designed object-oriented systems supporting updates and real-time interactions under performance constraints.
- Refactored performance-critical components to reduce instability, improving runtime in high-load execution paths.
- Maintained CI workflows and enforced code review standards to prevent regressions across multi-release cycles.

PROJECTS & INDEPENDENT EXPERIENCE

Production Monitoring Dashboard | Independent Project | 2025

- Built a monitoring dashboard for system health and service status using Node.js and WebSockets.
- Integrated Redis, Docker, and Kubernetes (k3s) for live data delivery and multi-replica service deployments.

E-Commerce API with CI/CD | Team of 8 | 2024 GitHub

- Developed a Go REST API using Gin and SQLite to support e-commerce data and order-processing workflows.
- Implemented Jenkins CI/CD automation for testing and deployment, using Docker and NGINX to deploy on Linux.

EDUCATION

The Evergreen State College — Olympia, WA | B.S. Computer Science & Software Engineering | December 2024
